

```
npm install react-router-dom
```

# 페이지스 폴더를 만들어주고

# 페이지스 안에 파일을 이런식으로 만들어 주고

```
import React, {Component} from 'react';

class Home extends Component{
  render(){
    return(
      <>
        Hello Home
      </>
    )
  }
}

export default Home
```

```
import {BrowserRouter,Route,Switch} from 'react-router-dom'
import Home from './pages/Home'
import Business from './pages/Business'
import RnD from './pages/Rnd'
import Company from './pages/Company'

class App extends Component{
  render(){
    return(
      <>
        <BrowserRouter>
          <Navbar />

          <Switch>
            <Route exact path="/" component={Home}/>
            <Route exact path="/company" component={Company}/>
            <Route path="/business" component={Business}/>
            <Route path="/rnd" component={RnD}/>
          </Switch>
        </BrowserRouter>
      </>
    )
  }
}
```

# 링크막기

- a태그 있는 곳에
- `import {Link} from 'react-router-dom'`

- a를 Link로
- href 를 to로

```
let { id, url, text } = item
return (
  <li key = {id}>
    <Link to = {url}>{text}</Link>
  </li>
)
```
